

## Bausch & Lomb - *Surgical Instruments Reporting*

### Business Need

- » B&L's Surgical Instruments business required consolidated view of KPI actuals and forecasts during migration from Baan to Peoplesoft.
- » Looking to replace existing, static and paper-based reporting done manually with Excel and Access.
- » Needed to support an integrated view of several forward-looking plans and forecasts, together with historical actuals.

### Solution

- » LPA designed, developed and implemented a solution that delivered Forecast, Orders, and Inventory metrics across Location, Time, Demand Group, and Product Class dimensions.
- » LPA built data mart and Cognos cubes that are refreshed on a daily basis.
- » Reporting and analysis capabilities were delivered via Cognos PowerPlay reports built and published to the web.
- » Ad Hoc analysis and cube navigation were provided with PowerPlay Web.
- » LPA completed the engagement, from Discovery/Requirements phase through implementation phase, in 3 months.
